

Nexa ThermoDial

Product ID: NEX-1007 | Category: Smart thermostat controller

Description

- A wall-mounted thermostat controller for compatible heating and cooling systems. ThermoDial supports temperature schedules, occupancy-aware setbacks, and clear system status messages in the Nexa Home app.

Key features

- Heating, cooling, and fan schedules with manual override.
- Energy report with setpoint and runtime trends.
- Compatible with common 24V HVAC installations.

Setup

- Turn off HVAC power at the breaker before replacing an existing thermostat.
- Match labels from the old terminals to the in-app wiring guide.
- Restore power, complete the compatibility check, and set home/away temperatures.

How to use

- Turn the dial for a temporary temperature change.
- Set schedules from Climate > Schedule and confirm the selected system mode.
- Use Away mode when the home will be empty for an extended period.

Error codes and resolutions

E801: Wiring check failed.

Turn off breaker power and verify wire labels against the installation guide.

E813: System not responding.

Wait five minutes for HVAC safety delay, then check the indoor unit breaker.

E829: Temperature sensor mismatch.

Remove the front cover, reseal it firmly, and run Sensor Check in Settings.
